

Dstny – Delivery Manager - QAP & Delivery Orchestration

This role ensures structured, predictable delivery across Product & Tech by owning orchestration of QAP (Quarterly Agile Planning), delivery governance, and cross-team execution. It drives alignment between Product, Engineering, and stakeholders, ensuring priorities are translated into execution with clear ownership, transparency, and follow-up.

Key responsibilities:

- Own and orchestrate QAP cycles (preparation, validation, prioritisation, follow-up)
- Ensure alignment between Product, Engineering, and business on priorities and delivery commitments
- Drive delivery governance, including tracking progress, risks, dependencies, and outcomes
- Ensure clear visibility of delivery status across teams (dashboards, reporting, cadence)
- Facilitate cross-team coordination to remove blockers and ensure flow
- Support structured decision-making in prioritisation and planning forums

- Collaborate with Architects to ensure architectural alignment, feasibility, and dependency clarity within delivery plans
- Drive continuous improvement of planning and delivery processes

- 4–8+ years experience in delivery management, program management, or product operations
- Proven experience managing cross-team delivery and planning processes
- Strong understanding of Agile and product delivery environments
- Experience with tools such as JIRA and planning/reporting frameworks
- Strong stakeholder management and facilitation skills
- Ability to structure ambiguity and drive alignment across teams
- Experience in SaaS, telecom, or platform organisations is a plus

- Experience working with Architects and managing architecture-driven dependencies is a strong advantage

- Bachelor's or Master's degree in Business, Engineering, or related field
- Certifications in Agile, delivery management, or project management are a plus

- Fluent English (written and spoken)
- Additional European languages (e.g. Dutch, French, Swedish) are a plus
